

GumBall6900

The Index Fund That Chooses Itself

WHAT IS THIS?

An index fund. The people who own it decide what goes in.

WHO IT'S FOR

Anyone who wants a diversified stake, without a manager.

YOU HOLD

GBX: a share of the fund. Deposit it as sGBX to signal and vote.

YOU GET BACK

Your share of the real assets, whichever ones you pick.

WHAT'S IN IT

Tokenized stocks, ETFs and crypto on Robinhood Chain.

One person, start to finish

Mara has \$500 to invest. Every fund she finds hands her a finished basket and decides when she can leave.

Illustrative: Mara, the amounts and the mix are invented.
Nothing has been bought yet.

1 She gets GBX

Mara buys \$500 of GBX, the token that represents her share of the fund.

GBX

2 She points it

She deposits GBX into voting sGBX signals for the assets she wants bought.

sGBX

3 The fund buys

New dollars follow all holders' signals. The price falls until a trader supplies the asset.

Strategy

4 The basket grows

The asset payment splits: 90% backs the basket and 10% rewards its signalers.

Fund

5 She takes her share

She burns her GBX and takes that exact share of the ones she picks. No desk, no notice.

redeem

How signaling works

Deposit GBX as voting sGBX signals. Every unit points to an asset until moved or withdrawn. Fund purchases back redeemable GBX.

THIS ROUND'S SIGNAL

NVDA

50%

QQQ

30%

TSLA

20%

All sGBX stays signaled. The next dollar follows the pool; move or withdraw any time.

WHAT IT ADDS UP TO

Nothing is sold, so the basket is every round so far.

■ NVDA ■ TSLA

What your share is worth

COMING OUT

Burn 1% of all GBX, get 1% of each asset you pick.

NEW GBX

Mining slots are always for sale, each price falling to zero over 1 hour. The buyer pays USDG and earns GBX until replaced: 80% of each payment repays the miner replaced, 20% is what the fund spends. Nobody is promised a replacement.

WHY YOU'D WANT IN

0%

Management fee, ever
